

Porci's Ocean Patrol Activity Sheet

Zooplankton – Cloze Activity Solutions (Level 1)

Zooplankton play an important role in the ocean's food **chains**. There are many kinds of zooplankton, some can be **microscopic** while others can be large jellyfish. Zooplankton can also include little creatures like mysids, **copepods** and the larvae or babies of animals such as urchins and crabs. Zooplankton eat food called **phytoplankton** which are tiny plant-like **algae** who use the sun to make their energy. The phytoplankton are so small that you need a microscope to see them.
